Sustainable, Accessible Research IT?

Sustainable ways to power HPC

Efficient compute

Accessible/reusable and clear code

Creative ways to empower research through
technology

Being open minded

UOY Journey to sustainable research IT

Research IT

2014 Senior role and 0.5 FTE role approved for Research IT. Development of initial HPC cluster (YARCC)

Teaching: Introduction of Python and Linux courses

Nov 2017 Sign off for Viking. £2.5 Million investment

November 2018 Viking goes live

Feb 2019 Official Viking Launch event

2014 YARCC and consolidation and modernisation of departmental infrastructure

Adoption of Easybuild

Jan 2018: New post created HPC team leader

Modernisation and centralisation of Departmental infrastructure.

Viking Service

£2.5 million pound investment by the university

Free to use by all staff and students

Viking Service

A facility that caters for the research performed at the University.

Over almost 5 years

1300 Registered users

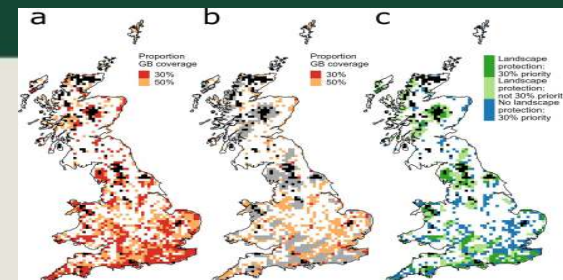

350 Separate projects

>190 research outputs (papers, articles, datasets, software etc.)

At least **£20 million** in grant funding where Viking has contributed

University first: using an external service provider to run our HPC facility

University first: using an external Datacentre (Leeds - AQL) to host the hardware

Translating area-based conservation pledges into efficient biodiversity protection outcomes Cunningham, C.A., Crick, H.Q.P., Morecroft, M.D. et al. *Commun Biol* 4, 1043 (2021).

Department of Archeology

Current Era

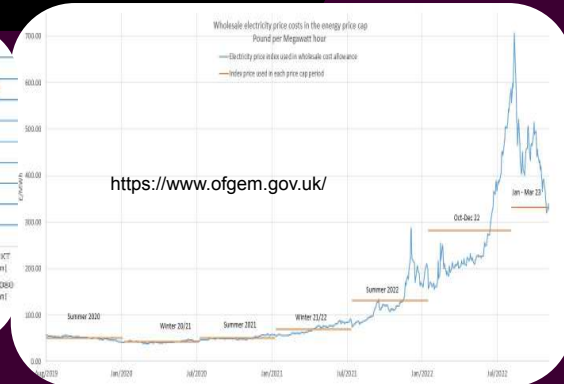

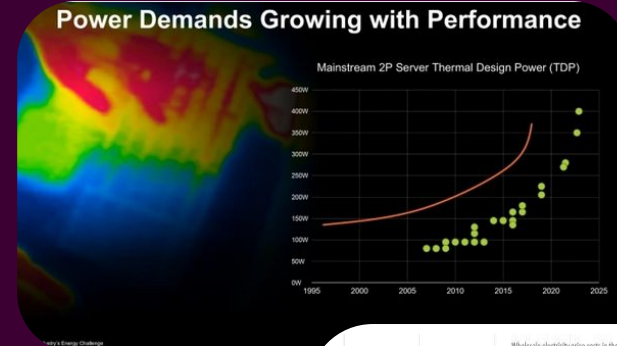

Powering HPC

CPUs and GPUs demand more power as they grow with performance.

University Data centres are not always viable.

- Not enough power
- Inappropriate cooling options
- Push to move kit from university owned DCs

Electricity Pricing has significantly increased

What can we do?

Cloud?

Work with vendors?

Write more efficient code?

Work with and lobby the government?

Cloud

- Great sustainability initiatives
- Flexibility in terms of resources and hardware.
- Can be expensive
- Barrier to entry can be steep

<https://blogs.microsoft.com/blog/2021/10/27/supporting-our-customers-on-the-path-to-net-zero-the-microsoft-cloud-and-decarbonization/>

Sustainable compute

Sustainable Compute Research Software Engineers

- Working efficiently with large volumes of data
- Improving existing software workflows
- Sustainable software practices
- Code optimisation & parallelisation
- Application profiling & benchmarking
- Data acquisition / storage / management
- Statistical modelling / machine learning
- Write better applications

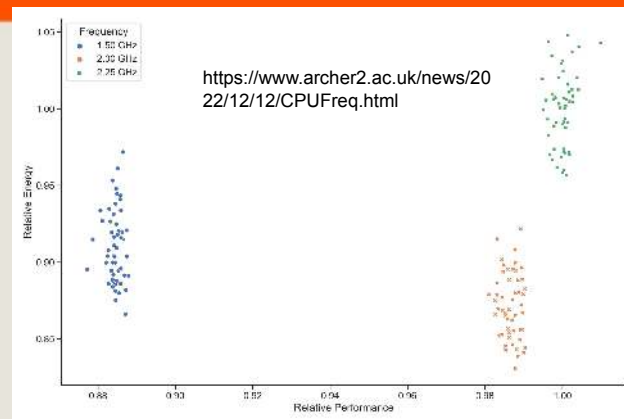

GEOS
Chem

Sustainable Compute - Infrastructure

- Schedulers
 - Supporting users with how they utilise scheduling their work.
 - Efficient ways of tuning/optimising our scheduler configuration
 - Work with users to be sensible with their usage.
- CPU frequency
- Cooling options
 - Air cooling
 - RDHX (air and water)
 - liquid cooling
 - immersive
- Data centre location

What are we doing?

- Procured Viking2 with a focus on sustainability.
- Located in a Datacenter with very strong eco credentials.
- Chipset choice with a focus on TDP vs Performance
- Continue to move workloads to Viking2
- Improved Data management

EcoDataCenter

How did we do it?

Jan 2022 start
looking at DC
options for V2

Oct 2022 Visit
to EcoDC

Feb 2023 EcoDC
Contract signed

May 2023
shipping and
tax discussions

September
18th Shipping
date

May 2022
Start looking into
sustainable and
affordable options

April 2023 Viking2
Hardware procurement

Some thoughts

Many institutions may start to find we do not have the power and cooling to run modern HPC environments.

It may also make it more difficult to build HPC environments in a sustainable manner.

Not all commercial Data Centers are well placed for hosting HPC.

Do we need to work together more to push building a sustainable HPC Data centre

Thank you for listening.
